

Strong Oxidizer

Strong oxidizer of organic materials :
REVATOP 36 :

- **eliminate the food source** that algae requires to grow and develop.
- **remove all organic impurities** from your water.
- **makes your pool** crystal clear.

Shock Action

REVATOP 36 **extends the life** of REVACIL by removing organic materials.

Easy to Use

REVATOP 36 is a 36% solution of hydrogen peroxide. This is a super clarifier that can replace a shock chlorine treatment for a crystal clear pool :

- Revatop 36 is **compatible with all treatments** : Chlorine, Bromine and all Biguanide (REVACIL, Baquacil, Soft Swim...).
- Revatop 36 **does not bring any stabilizer into the pool water.**
- Revatop 36 **has no odor in your pool.**
- Revatop 36 **is harmless to the environment** bringing only pure oxygen into the water.
- Revatop 36 **is safe to swim shortly after use.**
- Revatop 36 **is not a sanitizer.**

REVATOP 36

- Packaging :

2 x 1.5 gallon
bottles per
case

4 x 1 gallon
bottles
per case

My Pool is Green

For starters:

Balance the water and check that the pH is accurate.

Check that the filter is running efficiently.

Keep filter on continuously.

If the water is clear, but there is algae present on the side and bottom of your pool... it is advised to brush down these areas and do a mass flocculation in the pool.

When Floccing the pool, turn filter off after 2 hours – let sediment fall to bottom, vacuum to waste.

Clean and backwash your filter.

The next 3 steps for a clean pool :

⌚ OPERATION SHOCK with Revatop 36

⌚ OPERATION ALGAECIDE with RevaBlue

⌚ OPERATION FLOCK with RevaFlock or Revaklar

1 OPERATION SHOCK with Revatop 36 for a 15,000 gallon pool

FOR CHLORINE POOLS:

Combining Revatop 36 with a Super Shock Chlorine will produce a more efficient reaction.

- with the filter running add 2lbs of shock chlorine
- Chlorine level should be at least 5ppm
- 30 minutes later, carefully pour a bottle of Revatop 36 in the pool

FOR REVACIL POOLS:

Use a super dose of Revatop 36 (2 bottles of 1.5 gallon or 3 bottles of 1 gallon)

What to do ?

2 OPERATION ALGAECIDE with Revablu:

48 hours after Operation Shock use Revablu to prevent a reoccurrence of any algae.

Pour 1 quart of Revablu (per 15,000 gallons) in front of the returns.

3 OPERATION FLOCK with Revaflock or Revaklar:

Once you have finished the first 2 operations, your water should be blue, but rarely crystal clear.

Now, you need to remove the dead algae from the water by using a flocculent:

FOR SAND FILTER:

- ▶ Use **Revaklar** for hazy water
- ▶ Use **Reva Flock** for severely cloudy water.

FOR D.E. AND CARTRIDGE FILTERS

- ▶ Use **Revaflock**.

Once you have completed these 3 operations, you will have crystal clear blue water without algae. A week later, resume your normal maintenance schedule.

Dosage and Instructions for Revatop 36

REVATOP 36 is EASY TO USE :
1 gallon for a 10,000 gallon pool

Pour Revatop 36 directly next to the return preferable in the evening

CAUTION : to avoid any splashing in the eyes, place the neck of the bottle at the water level to pour contents of REVATOP 36 into the pool.

ROUTINE MAINTENANCE :

REVACIL :

Use REVATOP 36 once a month or more when the water temperatures exceeds 90°

1 gallon per 10,000 gallon

CHLORINE :

Use REVATOP 36 in place of chlorine shock

1 gallon per 10,000 gallon

Swim Happy
