

TOTEM TEST KIT

Analysis of sanitiser (REVACIL) and pH

- For safety, check **REVACIL** sanitiser level in the pool, each week, to adjust if necessary.

Using method

Sanitiser

1. Fill "D" tube with pool water up to the black line.
2. Add **6** drops of sanitiser reagent – cork tube and shake to mix
3. Take cap off and put tube in round space
4. Fill the second tube with pool water up to the line, and put it in the square space.
5. Turn white reflector towards light.
6. By turning the plastic wheel, choose colour or control-colour interval matching with tube colour.
7. If tube colour is :
 - Between position 3 and 4 : sanitiser level is correct
 - Next to position 2: add 0,1 litre of sanitiser per 10 m³ of pool water.
 - Next to position 0 : add 0,3 litre of sanitiser per 10 m³ of pool water.
 - Next to position 6 : overdose, wait until product is consumed.

pH

1. Fill "pH" tube with pool water up to the black line.
2. Add **6** drops of pH reagent – cork and shake to mix.
3. Take cap off and put tube in the round space.
4. Fill the second tube with pool water up to the line and put it in the square space.
5. Turn white reflector towards light.
6. By turning the plastic wheel, choose colour or control-colour interval matching with tube colour.
7. If tube colour is not in the ideal zone, according to water quality, add **REVA-MINUS** to bring pH down or **REVA-PLUS** to bring pH up.

Warning ! if you obtain colours like 6,8 and 8,2+, water pH may be much lower or much higher than the value indicated by the reagent; coming back to normal values will require a large quantity of **REVA-MINUS** or **REVA-PLUS**.

Precautions

- ◆ Do not invert tube caps in order not to mix the reagents.
- ◆ To pour reagent drops, keep bottle vertical to obtain regular drops.
- ◆ To see colours better, do the measures in the sun.
- ◆ Change reagents each year.
- ◆ Rinse tubes after each use.

Maintenance

- Fill tubes with half of water and add **6** drops of acid (white cap).
- Clean with bottle brush.
- Then, rinse well.

Safety

The reagents do not induce any particular hazard. However, we recommend to:

- ◆ Keep out of reach of children
- ◆ To avoid any accidental swallowing, do not eat, smoke or drink during use.
